B20T-6 LED

FUJITSU

Congratulations, you have decided to buy an innovative Fujitsu product.

Latest information about our products, tips, updates etc. can be found on the Internet at: "http://ts.fujitsu.com"

For automatic driver updates, go to: "http://support.ts.fujitsu.com/support/index.html"

Should you have any technical questions, please contact:

- Our Hotline/Service Desk
  (see the Service Desk list or visit: "http://ts.fujitsu.com/support/servicedesk.html")
- Your authorized distributor
- Your sales office

We hope you really enjoy using your new Fujitsu system.

FUJITSU

B20T-6 LED

Operating Manual

Contents

Your LCD screen...

has a whole range of useful features and functions, e.g.:

- TFT display (Thin Film Transistor; active matrix)
- Minimal space requirements thanks to slim casing
- LED background lighting
- Optimum ergonomic characteristics (totally distortion-free, excellent picture definition and colour purity right into the corners)
- High degree of brightness and good contrast
- Landscape and portrait mode
- High resolution (1600 x 900)
- Presentation of up to 16.7 million colours (in conjunction with an appropriate display adapter)
- Automatic scanning of horizontal frequencies from 30 to 82 kHz and refresh rates (vertical frequencies) from 56 to 76 Hz (absolutely flicker-free)
- Digital screen controller with microprocessor for storing 23 different display modes
- 4 x USB
- Freely adjustable colour alignment for matching the screen colours to the colours of various input and output devices
- Convenient operation via integrated OSD (On-Screen-display) menu
- VESA-DDC compatibility
- VESA-FPMPMI compatibility (Flat Panel Monitor Physical Mounting Interface) – Mounting device for swivel arm and wall bracket
- Plug&Play capability
- ECO function
- Digital video input (DVI) with HDCP
- Power management for reducing power consumption when the computer is not in use
- Compliance with the recommendations according to TCO 5.2
- The monitor fulfills all GS ("Geprüfte Sicherheit", Certified Security) requirements.

This operating manual contains important information you require to start up and run your LCD monitor.

A graphics card (display adapter) with VGA interface or a digital display adapter with DVI interface is required to control the LCD monitor. The monitor processes the data supplied to it by the display adapter. The display adapter or the associated driver software is responsible for setting the modes (resolution and refresh rate).

When putting the monitor into operation for the first time, the screen display should be optimally adapted to the display adapter used and adjusted in accordance with your needs (see chapter "Changing the monitor settings", Page 21.

Target group

You don't need to be an "expert" to perform the operations described here. Nonetheless, it is important to always observe the safety notes given in the operating instructions for the computer and in this manual.

In the event of any problems, please contact your sales office or our Service Desk.

Further information

Details of how you set the resolution and refresh rate are provided in the documentation for your display adapter and the associated driver software.

For ergonomic reasons, we recommend a screen resolution of 1600 x 900 pixels.

Because of the technology used (active matrix) an LCD monitor provides a totally flicker-free picture even with a refresh rate of 60 Hz.

Notational conventions

⚠	Pay particular attention to text marked with this symbol. Failure to observe these warnings could pose a risk to health, damage the device or lead to loss of data. The warranty will be invalidated if the device becomes defective through failure to observe these warnings.
i	Indicates important information for the proper use of the device.
►	Indicates an activity that must be performed.
↳	Indicates a result.
`This font`	Indicates data entered using the keyboard in a program dialogue or at the command line, e.g. your password (`Name123`) or a command used to start a program (`start.exe`).
This font	Indicates information that is displayed on the screen by a program, e.g.: `Installation is complete.`
This font	Indicates • terms and texts used in a software interface, e.g.: Click on *Save.* • names of programs or files, e.g. *Windows* or *setup.exe*.
"This font"	Indicates • cross-references to another section, e.g. "Safety information". • cross-references to an external source, e.g. a web address: For more information, go to "http://ts.fujitsu.com". • Names of CDs, DVDs and titles or designations of other materials, e.g.: "CD/DVD Drivers & Utilities" or "Safety" Manual.
Key	Indicates a button on the monitor, e.g: MENU .
This font	Indicates terms and texts that are emphasised or highlighted, e.g.: **Do not switch off the device.**

Important notes

In this chapter you will find information regarding safety which it is essential to take note of when working with your device.

Safety instructions

This device complies with the relevant safety regulations for data processing equipment, including electronic office machines for use in an office environment. If you have any questions about whether the device can be used in the intended environment, please contact your sales office or our Service Desk.

- The display surface of the device is sensitive to pressure and scratches. You should therefore be careful with the display surface in order to avoid lasting damage (scratches).
- If the device is brought into the installation site from a cold environment, condensation can form. Before operating the device, wait until it is absolutely dry and has reached approximately the same temperature as the installation site.
- When installing and operating the device, please observe the notes on environmental conditions in Chapter "Technical specification", Page 33 as well as the instructions in Chapter "Setting up an ergonomic video workstation", Page 12.
- To ensure sufficient ventilation, the air inlet and outlet openings of the device must be kept clear.
- The device automatically sets itself to the correct voltage within the range from 100 V to 240 V. Make sure that the local mains voltage is neither higher nor lower than this range.
- Ensure that the power socket on the device and the mains outlet are freely accessible.
- The ON/OFF switch does not disconnect the monitor from the mains voltage. To disconnect fully from the mains supply, disconnect the power plug from the socket.
- The device is equipped with a power cable that complies with safety standards.
- Use the supplied power cable only.
- Lay the cables in such a way that they do not create a hazard (danger of tripping) and cannot be damaged. When connecting the device, observe the relevant notes in chapter "Connecting the device", Page 17.
- No data transfer cables should be connected or disconnected during a thunderstorm.
- Make sure that no objects (e.g. jewellery chains, paper clips, etc.) or liquids get inside the device (danger of electric shock, short circuit).
- The device is not waterproof! Never immerse the device in water and protect it from spray water (rain, sea water).
- In an emergency (e.g. damaged casing, operation controls or cables, penetration of liquids or foreign matter), switch off the device, disconnect the power plug and contact your sales outlet or our Service Desk.
- Repairs to the device must only be performed by qualified technicians. Unauthorised opening and incorrect repair may greatly endanger the user (electric shock, fire risk).
- Only use the screen resolution settings and refresh rates specified in Chapter "Technical specification", Page 33. Otherwise you may damage the device. If you are in any doubt, contact your sales outlet or our Help Desk.
- Use a screen saver with moving images and activate the power management for your monitor to prevent still images from "burning in".
- If you operate the device with the swivel arm or wall bracket, it must not be turned by 180°.

- The device must only be operated in landscape mode (0°) and portrait mode (90°). The control buttons are located in the middle of the bottom of the monitor in landscape mode (0°) and at the left-hand side of the monitor in portrait mode (90°).
- Store this manual close to the device. If you pass the device on to third parties, you should pass this manual on with it.
- We recommend that you place your device on a durable, non-slip surface. In view of the many different finishes and varnishes used on furniture, it is possible that the feet of the device may mark the surface they stand on.
- To ensure sufficient ventilation, the air supply and air outlet openings of the monitor must never be blocked.

Power cable

Use the supplied power cable only.

Use the following guidelines if it is necessary to replace the original cable set.

- The female/male receptacles of the cord set must meet IEC60320/CEE-22 requirements.
- The cable has to be HAR-certified or VDE-certified. The mark HAR or VDE will appear on the outer sheath.
- For devices which are mounted on a desk or table, type SVT or SJT cable sets may be used. For devices which sit on the floor, only SJT type cable sets may be used.
- The cable set must be selected according to the rated current for your device.
- If necessary, replace the original power cable with a regular grounded 3-core mains lead.

Transporting the device

Transport all parts separately in their original packaging or in a packaging which protects them from knocks and jolts, to the new site.

Do not unpack them until all transportation manoeuvres are completed.

If the device is brought from a cold environment into the room where it will be used, condensation may occur. Before operating the device, wait until it is absolutely dry and has reached approximately the same temperature as the installation site.

Cleaning the device

⚠ Switch off the device and unplug the power plug.

Do not clean any interior parts yourself, leave this job to a service technician.

Do not use any cleaning agents that contain abrasives or may corrode plastic.

Ensure that no liquid enters the device.

The display surface of the device is sensitive to pressure and scratches. Clean it only using a soft, slightly moistened cloth.

The surface of the casing can be cleaned with a dry cloth. If particularly dirty, use a cloth that has been moistened in mild domestic detergent and then carefully wrung out.

CE marking

The shipped version of this device complies with the requirements of EEC directives 2004/108/EC "Electromagnetic compatibility" and 2006/95/EC "Low voltage directive".

Energy Star

The Fujitsu LCD monitor is equipped with a power management system which reduces the power consumption in OFF mode to less than 0.5 W. With this, the LCD monitor satisfies the requirements of the U.S. Environmental Protection Agency (EPA).

The EPA estimates that computer equipment uses approximately 5 % of all business electricity and that this is growing rapidly. If all desktop PCs and peripherals were to enter a low-power mode when not in use, the overall electricity saving could amount to $ 2 billion annually. These savings could also prevent the emission of 20 million tons of carbon dioxide into the atmosphere - equivalent to the discharge from 5 million cars.

As an Energy Star Partner, Fujitsu Technology Solutions GmbH has determined that this product meets the Energy Star guidelines for energy efficiency.

Disposal and recycling

This device has been manufactured as far as possible from materials which can be recycled or disposed of in such a way that the environment is not damaged. The device may be taken back after use to be reused or recycled, provided that it is returned in a condition that befits its intended use. Any components not reclaimed will be disposed of in an environmentally acceptable manner.

The device must be disposed of in accordance with the local regulations for disposal of special waste.

If you have any questions on disposal, please contact your local sales office or our Service Desk, or contact one of the following directly:

Germany	Belgium	Switzerland
Fujitsu Technology Solutions GmbH Remarketing and Recycling D-33106 Paderborn Tel.: +49 5251 / 81 80 10 Fax: +49 5251 / 81 80 15 "http://ts.fujitsu.com/wvm"	RECUPEL Boulevard Reyers, 80 B-1030 Brussels Tel.: +32 2 / 706 86 16 Fax: +32 2 / 706 86 13 E-Mail: info@recupel.be "http://www.recupel.be"	SWICO Schweizerischer Wirtschaftsverband der Informations-, Kommunikations- und Organisationstechnik A list of the SWICO acceptance locations can be found at: "http://www.swico.ch"

Information on this subject is also available on the Internet at "http://ts.fujitsu.com/recycling".

Getting started

Unpacking and checking the delivery

⚠ The display surface of the device is sensitive to pressure and scratches. Always hold the device by the casing!

The complete device package includes:

• one monitor
• one data cable (DVI)
• one data cable (VGA)
• one USB cable
• one audio cable
• one power cable
• one CD with software and documentation
• one warranty card
• one "Quick Start Guide" brochure
• one "Safety" manual

► Unpack all the individual parts.
► Check the contents of the package for any visible damage caused during transport.
► Check whether the delivery conforms to the details in the delivery note.
► Should you discover that the delivery does not correspond to the delivery note, notify your local sales outlet immediately.

i Do not discard the original packing material of the devices. You may need the packaging in the future if you need to transport your device.

Setting up the device

 To ensure sufficient ventilation, the air inlet and outlet openings of the device must be kept clear.

Setting up an ergonomic video workstation
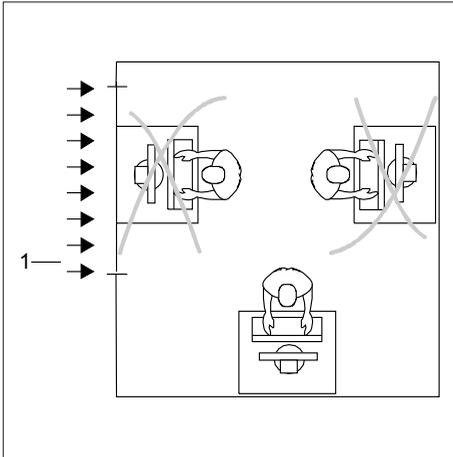

► Do not position the video workstation opposite a window (1).
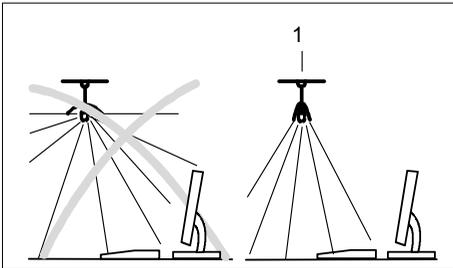

► Position the monitor outside the reach of a light source (1).
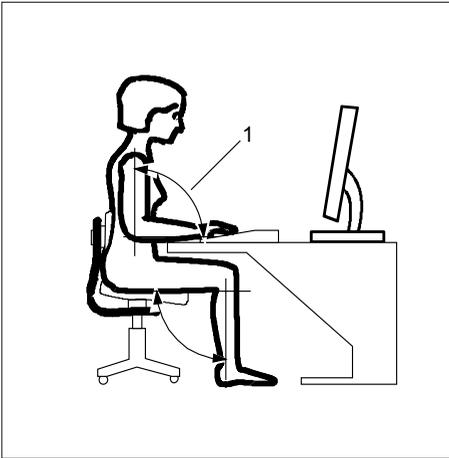

► Position the keyboard where it is easiest to reach (1).
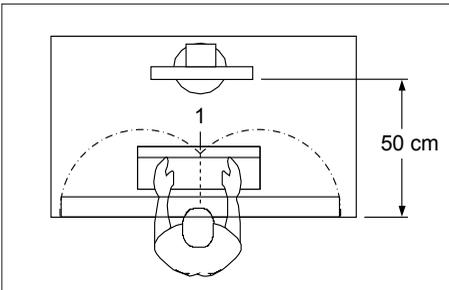

► Position the monitor so that the eye distance to the screen (1) is around 50 cm.
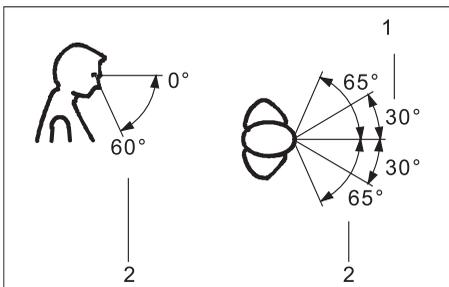

► Position the monitor for optimum viewing (1). The monitor should under no circumstances fall outside the permissible viewing space (2).

i Depending on the situation, it may be advisable to use a swivel arm or wall bracket (VESA FPMPMI), which are available from specialist dealers. For this purpose the monitor base must be removed beforehand as described in Chapter "Removing monitor base", Page 16.

Mounting the monitor base

Do not remove the retaining splint before you have secured the base plate on the monitor and have brought it into operating position.
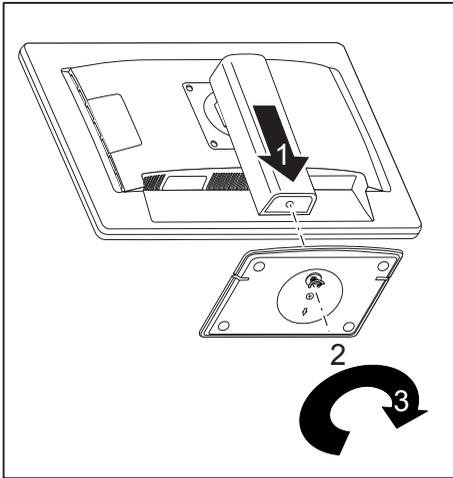

► Insert the base plate on the foot (1).
► Guide the screw through the opening (2).
► Secure the base plate with the screw (3).
► Place the monitor in operating position.

Adjusting height

⚠ The height adjustment is fixed in the transport position.
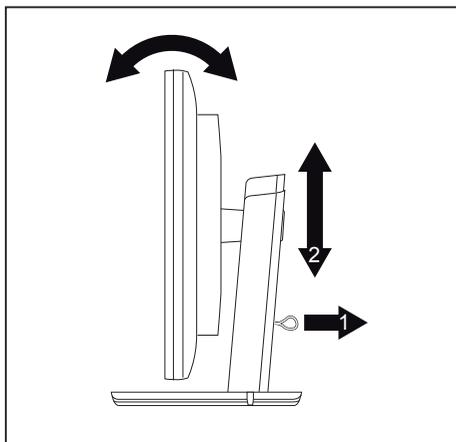

► To free the fixing, remove the locking pin on the flange (1).

↳ The height of the monitor can be adjusted by approximately 120 mm.

► Grasp the monitor with both hands on the right and left edge of the casing and move it up or down (2).

Adjusting the inclination

The inclination of the monitor can be adjusted by -5° (forwards) and +35° (backwards) from its vertical position.

► Hold the monitor with both hands on the left and right sides of the casing and move it to the desired angle.

Adjusting the rotation

► Grasp the monitor with both hands on the right and left edge of the casing and turn it to the desired position.

Adjusting portrait format

The monitor can be rotated from horizontal format (landscape mode) into
vertical format (portrait mode).

► Grasp the monitor with both hands on the right and left edge of the casing, tilt the monitor
backwards, move it into the highest position and turn it clockwise until it is in the portrait position.

i For you to be able to display the screen contents in portrait mode, your graphics card
will also need to support this function or you will need to use special software.

In the OSD menu you have the option of switching the OSD manually
from landscape mode to portrait mode (see "Changing the monitor
settings using the OSD menu", Page 24).

To reset the monitor to landscape mode, the monitor should be turned anti-clockwise.
The OSD display can be reset again in the OSD menu.

Removing monitor base

Before you can use a swivel arm or a wall bracket, you must remove the monitor base.

! The display surface is susceptible to scratching!
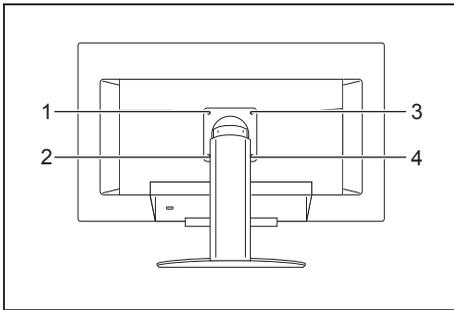

► Switch off the monitor and pull the power
plug out of the power socket.

► Lay the monitor on its face on a soft surface.

► Remove the cover and disconnect all cables.

► Remove the screws (1-4) on the
rear of the monitor.

↳ You can now mount a swivel arm or a wall
bracket in accordance with VESA FPMPMI
using a hole spacing of 100 mm.

i For instructions on how to mount the swivel arm or wall bracket, please see
the documentation for the swivel arm or wall bracket.

Connecting the device

Please observe the safety information in "Important notes", Page 7.

CE conformance and optimum picture quality are guaranteed only if you use the data cables supplied.

► Switch off the monitor and the computer.
► Disconnect the power plug from the computer.

Connecting cables to the monitor

The data cables supplied have two 15-pin D-SUB connectors or two 24-pin DVI connectors for connection to the monitor and to the computer.

Information on the computer connections and interfaces is contained in the operating manual for the computer.
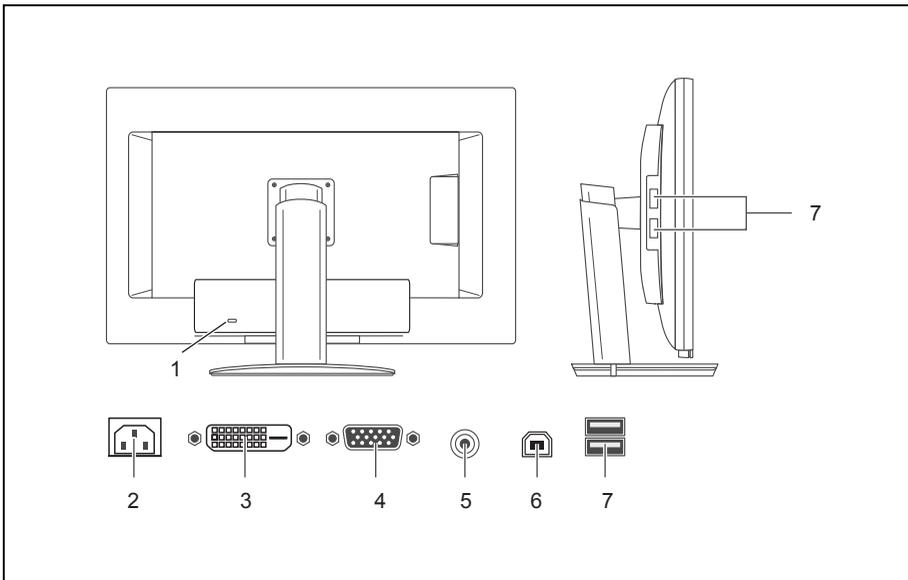

1	= Security slot for the "Kensington Lock"	5	= AUDIO-IN socket
2	= Power connector	6	= USB IN (Downstream)
3	= DVI-D socket (DVI)	7	= USB OUT (Upstream)
4	= D-SUB socket (VGA)		

► Select the appropriate data cable for your computer.

► Connect one of the connectors of the data cable to the D-SUB socket or DVI-D socket of the monitor and secure the plug-in connection by tightening the safety screws.

| **i** | The monitor automatically detects the input when only one signal source is connected. |

► Insert one plug of the audio line in the AUDIO IN socket on the monitor and make sure it is properly engaged.
► Plug the supplied USB cable into the USB IN socket and the other end of the cable into a USB socket of the computer.

| **i** | Connect the USB keyboard and USB mouse directly to the PC, as the USB connector socket of the monitor is switched off in energy-saving mode. |

► Plug the power cable supplied into the power connector of the monitor.

| **i** | A lock (Kensington Lock) can be mounted in the security slot to protect the monitor from theft. A Kensington Lock is not included with the monitor at delivery. |

Connecting cables to the computer

Information on the computer connections and interfaces is contained in the operating manual for your computer.

► Connect the data cable to the (active) monitor port on the computer and secure the plug-in connection by tightening the safety screws.
► Insert the other plug of the audio cable in the audio output of the computer.
► Plug the power connector of the monitor into a properly grounded mains outlet.
► Plug the power connector of the computer into a properly grounded mains outlet.

| **i** | If your computer has two monitor ports ("onboard" screen controller and separate graphics card), the monitor port for the separate graphics card is active as standard. |

Operation

Switching the device on and off
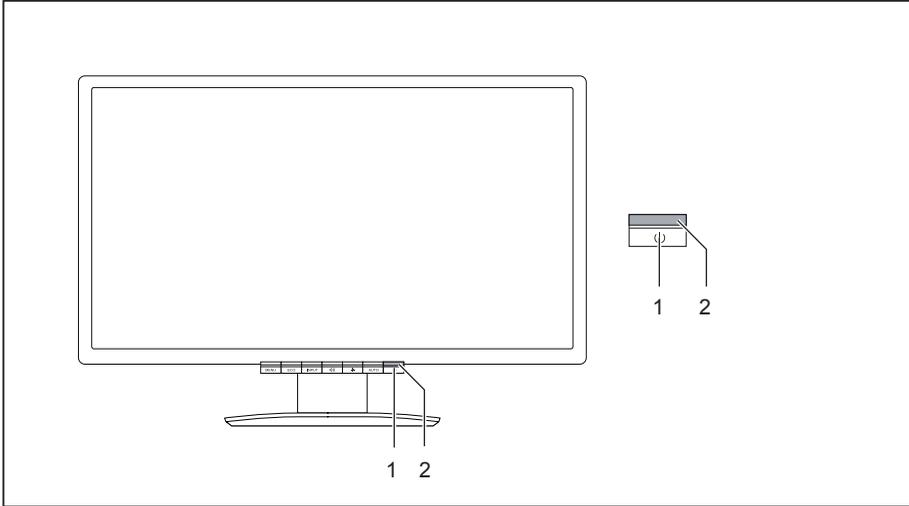

1 = Switch On/Off   2 = Power supply indicator

The colour of the LED indicator changes as follows:

LED indicator	Status
blue	Monitor and computer are switched on (normal mode).
green	Monitor and computer are switched on (ECO mode).
orange	Monitor is not receiving a video signal or is in power saving mode.
does not light up	The monitor is switched off (or is in power saving mode - power consumption in standby and off mode ≤ 0.5 W).

► Switch the device on again with the ON/OFF switch (1).

Notes on power management

If your computer is equipped with power management (power-saving mode), the monitor can fully support this function. Here the monitor does not distinguish between the individual energy-saving modes of the computer (standby mode, suspend mode and OFF mode), as it is capable of immediately switching into the mode with the highest energy-saving effect.

Stage	Operation		Power saving mode
	Normal	ECO	
Power supply indicator	lights up blue	illuminated green	is orange
Display	max. brightness	typ. 175 cd/m^2	unlit
Typical power consumption (without USB and audio)	< 24 W	< 20 W	reduced to < 0,5 W

If your computer detects inactivity (no input) it sends an appropriate signal to the monitor to reduce the power consumption (power management mode). The power indicator of the monitor changes colour to show the change in status. ECO operation is the preset factory default.

Once an input is made at the computer the screen contents are restored.

> **i** For detailed information on how energy-saving mode operates, please refer to the operating manual or technical manual of the computer.

Changing the monitor settings

When putting the monitor into operation for the first time, the screen display should be optimally adapted to the display adapter used.

Changing the monitor settings with the buttons of the control panel

i The buttons of the control panel have two functions. When the OSD menu is active, the current meaning of the buttons is shown directly over the buttons on the edge of the screen (softkeys). With the OSD menu not activated, you can make the following settings directly:

```
MENU   ECO   INPUT   ◁))   ☀   AUTO   ⏻
              1                      2   3
```
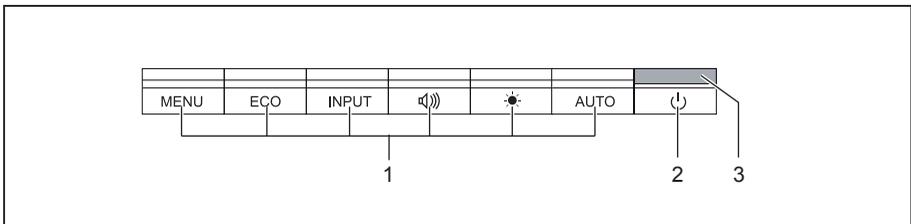

1 = Buttons for the OSD menu (On Screen Display)

2 = ON/OFF switch

3 = Power supply indicator

Softkeys

→	Switch to submenu
	Start (with *Auto level* and *Factory recall*)
▲ ▼	Navigation within a menu
△ ▽	Select option
+ -	Change value
✓	Apply changes and return to main menu
↰	Reject changes and return to main menu
✖	Exit the OSD menu

Select OSD language

If one of the buttons is being pressed for the first time for the OSD menu, the selection screen for the language is displayed:

► Press the 🕪 / △ button or the ☀ / ▽ button to choose the desired language.

► Press the MENU / ✓ button to confirm.

> **i** After selecting the OSD language for the first time, you can change it at any time in the OSD.

Performing auto-adjustment of the monitor

► Press the AUTO button for about 1 second.

↳ The *Auto Processing* message appears

Picture quality and position are set to optimum values for your system.

Select input signal (D-SUB/DVI-D)

► Press the INPUT button to call the *Input select* setup window.

► Press the 🕪 / △ button or the ☀ / ▽ button to select the desired monitor connection (VGA or DVI).

► Press the MENU / ✓ button to confirm or the AUTO / ↺ button to cancel.

> **i** This setting window can also be called when the OSD menu is locked.

Locking the OSD menu

The OSD menu can be locked to prevent accidental or unauthorised changes to the monitor settings.

► Press and hold the MENU button for a few seconds while you switch on the monitor with the ON/OFF switch.

↳ The message *OSD locked / unlocked* is displayed.

> **i** Please proceed in the same manner to release the locked OSD menu again.

Activate/deactivate ECO operating mode

i   The power consumption of the device can be decreased by reducing the brightness of the picture.

► Press the ⎡ ECO ⎤ button to switch the ECO operating mode on or off.

↳ The message *ECO Mode ein* or *ECO Mode off* appears.

If the ECO operating mode is activated, the following OSD settings are changed:

Mode	Office
Colour	6500 K
Brightness	reduced

After the ECO operating mode is switched off, the brightness previously set by the user is restored.

Locking the ON/OFF button

The ON/OFF switch can be locked to prevent accidental or unauthorised changes to the monitor settings.

► Press the ⎡ ECO ⎤ button and the ⎡ INPUT ⎤ button at the same time and keep them pressed for a few seconds.

↳ The message *Power button locked / unlocked* is displayed.

i   Proceed in the same way to release the locked ON/OFF switch again.

Changing the monitor settings using the OSD menu

With the buttons on the control panel, you can call up and use the integrated OSD (On-Screen Display) menu.

i	The English menu names are used in the following description (default setting).
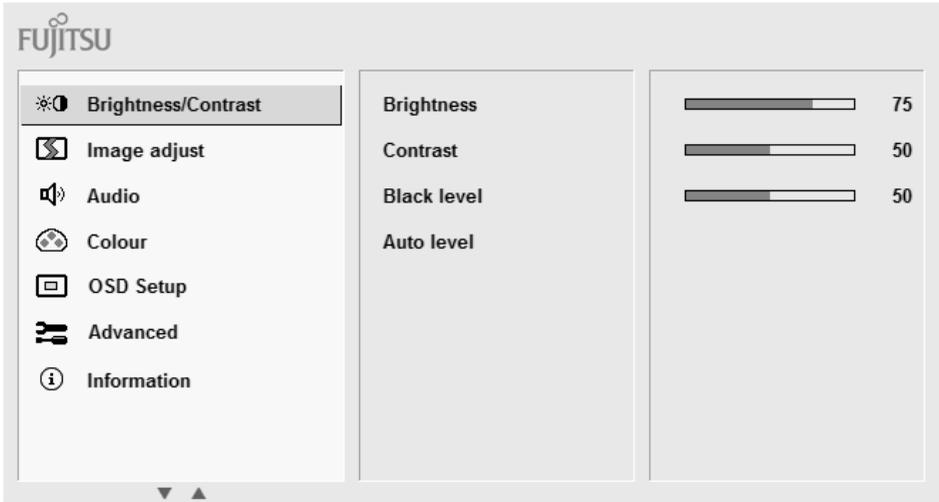

► Press the ⌈MENU⌋ button to activate the OSD menu.

↪ The main menu appears, with icons for the setting functions.

The first symbol, (*Brightness/Contrast*), is highlighted and the associated functions are visible in the right-hand menu field.

► Press the ⌈ECO⌋ / ▲ button or the ⌈INPUT⌋ / ▼ button, to mark another symbol (e. g. *Image adjust*).

► Press the ⌈MENU⌋ / � button to select the marked symbol.

↪ The *Image adjust* setup window will be displayed.
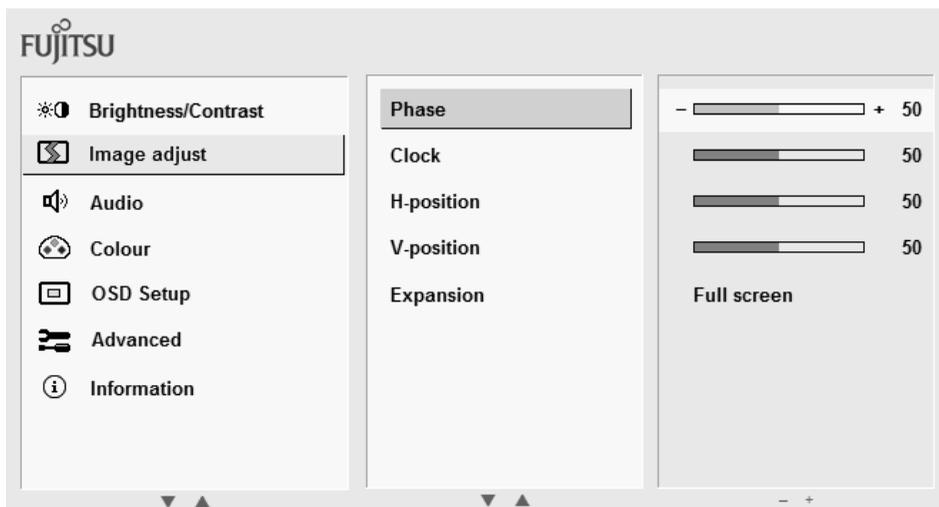

► Press the ECO / ▲ button or the INPUT / ▼ button to mark another function.
► Press the 🔊 / + button or the ☀ / − button to change the setting.
► Press the MENU / ✓ button to save the change or the AUTO / ↺
   button to quit the function without change.
► Press the MENU / ✗ button to quit the OSD menu.

i	If you wish to change other settings, select the corresponding function from the OSD main menu. All the possible settings of the main menu are described below.

OSD menu functions

i	The OSD menu for analogue monitor operation is described below. During digital operation some functions are not available, they are not needed because of the digital transmission technology being used.

Adjusting the brightness and contrast

☀️◑	Call up the *Brightness/Contrast* setting window
Brightness	Set the brightness of the display
	With this function you change the brightness of the background lighting.
Contrast	Set the contrast of the display
	With this function you modify the contrast of bright colour tones.
Black level	Set the brightness of the display
	With this function you modify the contrast of dark colour tones.
Auto level	Adjust the signal level
	With this function you can automatically set the contrast.
	The function is executed with the �souche button.

i	If the contrast is set too high, bright surfaces can no longer be distinguished from very bright surfaces. If the contrast is set too low, the maximum brightness will not be achieved.

Adjusting the picture size and position

🔳	Call the *Image adjust* setting window
Phase	Eliminate picture disturbance
	With this function you fine-tune your monitor to eliminate picture disturbance.
Clock	Set synchronisation
	With this function you adjust the picture width to eliminate vertical picture disturbances.
H-Position	Adjust the horizontal position
	With this function you move the picture to the left or to the right.
V-Position	Adjust the vertical position
	With this function you move the picture up or down.
Expansion	Adjust the picture size
	Full screen = selection of full screen mode
	Keep aspect = maximum picture size without distortion

Adjusting the volume

🔊	Call the *Audio* setting window
Volume	Set the volume for playback with the integrated loudspeakers
Mute	Switch the loudspeakers off or on

Setting colour temperature and colours

⬤⬤	Call the *Colour* setting window
	Select the colour temperature
	The "warmth" of the screen colours is set using the colour temperature. The colour temperature is measured in K (= Kelvin). You can choose between *sRGB*, *6500 K*, *7500 K*, *9300 K*, *Native* and *Custom Colour*.
	In the user-defined setting you can change the colour ratios of the basic colours (red, green, blue) as required.

Adjusting the display of the OSD menu

🔲	Calling the *OSD Setup* adjustment window
Language	Selecting the language for the OSD menu
	With this function you select the language for the OSD menu.
	The default setting is English.
OSD Timeout	Setting the display duration of the OSD menu
	With this function you can select a value from 10 to 120 seconds.
	If the set time expires without a setting being made, the OSD menu is automatically hidden.
OSD Rotation	With this function you switch the OSD menu from portrait mode to landscape mode and vice versa.
	On = The OSD menu is displayed in portrait mode.
	Off = The OSD menu is displayed in landscape mode.

Setting functions in the Advanced menu

[icon]	Call up the *Advanced* setting window
Input select	Selecting the input signal
	This function allows you to switch the monitor from analogue to digital mode and vice versa, when several signal sources are connected.
	This requires that the graphic card used supports this function.
DDC-CI	Activation/deactivation of the DDC-CI
	On = The DDC-CI function is enabled (standard setting)
	Off = The DDC-CI function is disabled
ACR	Enable/disable ACR function
	On = The ACR function is enabled
	Off = The ACR function is disabled (default setting)
Factory Recall	Activating the factory settings
	With this function all settings are reset to the factory settings without prompting for confirmation.
	Press the [icon] button to activate the function. The message Auto Processing is displayed.

Displaying information

[icon]	Call the *Information* setting window
	With this function, the model designation, serial number, resolution, H/V frequency, input signal, colour setting and polarity of the synchronisation signal are displayed.

Notes on ergonomic colour adjustment

| i |

If you select colours for the monitor in your application programmes, take note of the information below.

The primary colours blue and red on a dark background do not produce the minimum required contrast of 3:1 and are therefore not suitable for continuous text and data entry.

When using several colours for characters and background and giving the primary colours full modulation, you can obtain very suitable colour combinations (see the following table):

Background	Characters							
	black	white	purple	blue	cyan	green	yellow	red
black		+	+	-	+	+	+	-
white	+		+	+	-	-	-	+
purple	+	+		-	-	-	-	-
blue	-	+	-		+	-	+	-
cyan	+	-	-	+		-	-	-
green	+	-	-	+	-		-	-
yellow	+	-	+	+	-	-		+
red	-	+	-	-	-	-	+	

+ Colour combination very suitable

- Colour combination not suitable because colour hues are too close together, thin characters are not identifiable or rigorous focusing is demanded of the human eye.

Troubleshooting

Should an error occur, first check the following points. If the distortion is still not eliminated, the monitor should, if possible, be checked on another computer.

If you cannot solve the problem, please contact our Service Desk.

Having this problem?	Check the following points:
No screen display Power indicator does not light up	► Check whether the ON/OFF switch on the monitor is switched on. ► Check whether the power cable on the monitor is connected correctly. ► Check whether the computer is switched on.
No screen display Power indicator is lit	► Check whether the computer is switched on. ► Check whether the data cable for the monitor is correctly attached to the monitor port on the computer. ► Press any key on the computer keyboard. The computer may be in power saving mode. ► Alter the brightness and/or contrast until you get a picture.
Message: `No Signal`	► Check whether the data cable for the monitor is correctly attached to the monitor port on the computer. ► Check whether the computer is switched on.

Message:
 	
`Frequency out of range:`
`## kHz / ## Hz`
`Please change the display mode`
`to 1600 x 900 with 60 Hz`
	The input signal (horizontal frequency and refresh rate) at the displayed input does not correspond to the technical data for the monitor.
	
	► Adjust the video frequency range using the computer software (see documentation for the computer or display adapter).
	► Set a different screen resolution using the computer software (see documentation for the computer or display adapter).

Picture position not correct	The monitor recognises an undefined mode (see chapter "Technical specification", Page 33). ► Press the AUTO button to conduct the auto-adjustment of the screen.
Picture is shaking	► Check whether the data cable for the monitor is correctly attached to the monitor port on the computer. ► Press the AUTO button to conduct the auto-adjustment of the screen.
Picture is wrongly adjusted	► Run the *Factory Recall* function in the OSD menu. The *Auto Processing* message appears.

Having this problem?	Check the following points:
Picture disturbances (vertical lines)	► Press the AUTO button to conduct the auto-adjustment of the screen.
Picture disturbances (horizontal lines, picture noise)	► Press the AUTO button to conduct the auto-adjustment of the screen.
The screen becomes darker	The background lighting has a limited lifetime. If your monitor display should become too dark, the background lighting will have to be replaced. ► Contact our Service Desk.

Explanatory information about standard ISO 9241-307

Permanently unlit or lit pixels

Today's production techniques cannot guarantee an absolutely fault-free screen display. Depending on the total number of pixels (resolution), there may be a few constantly lit or unlit pixels or subpixels.

Pixel	A pixel consists of 3 subpixels, normally red, green and blue. A pixel is the smallest element that can be generated by complete functionality of the display.
Subpixel	A subpixel is a separately addressable internal structure within a pixel that enhances the pixel function.

The maximum permitted number of faulty pixels is stipulated in the international standard ISO 9241-307. In accordance with standard ISO 9241-3, LCD monitors by Fujitsu comply with Class II for low resolutions and Class I for resolutions of 1600 x 900 (1440000 pixel) and higher.

Examples:

A flat-screen monitor with a resolution of 1280 x 1024 has 1280 x 1024 = 1310720 pixels. Each pixel consists of three subpixels (red, green and blue), so there are almost 3,9 million subpixels in total. According to ISO 9241-3 (Class II), a maximum of 2 lit and 2 unlit pixels and in addition 6 lit and 1 unlit subpixels or 13 unlit subpixels or a corresponding combination may be faulty (1 lit subpixel counts as two unlit subpixels).

A flat-screen monitor with a resolution of 1600 x 900 has 1600 x 900 = 1440000 pixels. Each pixel consists of three subpixels (red, green and blue), so there are almost 4,3 million subpixels in total. According to ISO 9241-3 (Class I), a maximum of 1 lit and 1 unlit pixel and in addition 3 lit and 1 unlit subpixels or a maximum of 7 unlit subpixels or a corresponding combination may be faulty (1 lit subpixel counts as two unlit subpixels).

Technical specification

⚠ Condensation is not permitted, neither in the rated range of operation nor in the limit range of operation.

		B20T-6 LED
Dimensions and weight		
Visible diagonals		50.8 cm
Dot pitch		0.2767 mm
Image size	Width	442.8 mm
	Height	249.1 mm
Maximum resolution		1600 x 900
Dimensions incl. monitor base	Width	475 mm
	Height	320 mm
	Depth	168 mm
Weight (without packaging)		approx. 4,4 kg
Storable display modes		23
Pixel error classes according to ISO 9241-307	Class	I
Electrical data		
Video	Analog	positive, 0.7 V_{ss}, 75 Ω
	Digital	DVI-D with HDCP
Synchronisation		Separate Sync. TTL, positive or negative
Horizontal frequency		30 kHz .... 82 kHz (multi-scanning)
Refresh rate		56 Hz .... 76 Hz
Maximum pixel rate		165 MHz
Power supply		Switches automatically 100 V – 240 V, 50 Hz – 60 Hz
Total power consumption (excluding audio, USB)	Normal operation	< 24 W
	ECO operating mode	< 20 W
	Power saving mode	< 0.5 W
Sound output		1.5 W left; 1.5 W right
Environmental conditions		
Environment class 3K2, DIN IEC 721		
Rated range of operation		15 °C .... 35 °C
Humidity		15 % .... 85 %
Limit range of operation		5 °C .... 35 °C
Humidity		15 % .... 85 %

VESA-DDC-compatible VGA interface

Your monitor is equipped with a VESA-DDC-compatible VGA interface. VESA-DDC (Video Electronics Standard Association, Display Data Channel) is used as the communications interface between the monitor and the computer. If the computer is equipped with a VESA-DDC-compatible VGA interface, it can automatically read the data for ensuring optimum operation from the monitor and select the appropriate settings.

Preset operating modes

> **i**   The picture position and size have been set to optimum values at the factory for the operating modes listed above. Depending on the display adapter used, it may be necessary to adjust the display position or size. In this case, you can change and save the settings (see chapter "Changing the monitor settings", Page 21).
>
> For ergonomic reasons, a screen resolution of 1600 x 900 pixels is recommended. Because of the technology used (active matrix), an LCD monitor provides a totally flicker-free picture, even with a refresh rate of 60 Hz.

Most frequent operating modes

Horizontal frequency	Refresh rate	Screen resolution
31.5 kHz	70 Hz	720 x 400
31.5 kHz	60 Hz	640 x 480
37.5 kHz	75 Hz	640 x 480
37.9 kHz	60 Hz	800 x 600
46.9 kHz	75 Hz	800 x 600
48.4 kHz	60 Hz	1024 x 768
60.00 kHz	75 Hz	1024 x 768
64.00 kHz	60 Hz	1280 x 1024
80.00 kHz	75 Hz	1280 x 1024
60.00 kHz	60 Hz	1600 x 900

SUB D port
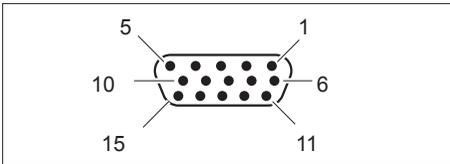

Pin	Meaning
1	Video input red
2	Video input green
3	Video input blue
4	Ground
5	Ground
6	Video ground red
7	Video ground green
8	Video ground blue
9	+5 V (DDC)
10	Sync. ground
11	Ground
12	DDC Data
13	H. sync
14	V. sync
15	DDC Clock

DVI-D port
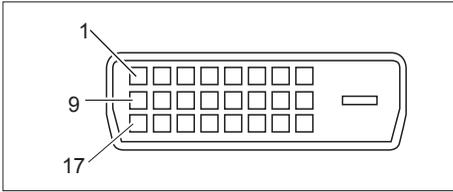

Pin	Meaning
1	TMDS Data2–
2	TMDS Data2+
3	TMDS Data 2/4 Shield
4	not connected
5	not connected
6	DDC Clock
7	DDC Data
8	Analog Vertical Sync
9	TMDS Data1–
10	TMDS Data1+
11	TMDS Data 1/3 Shield
12	not connected
13	not connected
14	+5V Power
15	Earth
16	Hot Plug Detect
17	TMDS Data0–
18	TMDS Data0+
19	TMDS Data 0/5 Shield
20	not connected
21	not connected
22	TMDS Clock Shield
23	TMDS Clock+
24	TMDS Clock–
